

Assignment 1

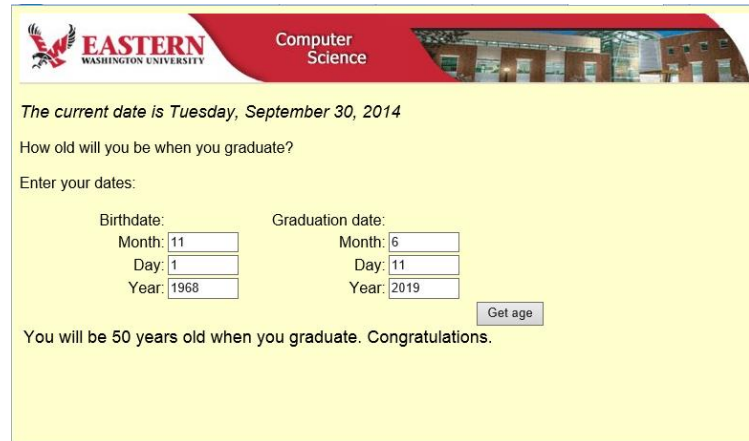

Getting Started with ASP.NET and Visual Studio

Graduation Age

35 points

See Canvas for due date

This assignment will serve as an exercise to establish and confirm the proper configuration and installation of ASP.NET development environment (Visual Studio, IIS and IE.) This assignment is to be 'Projectless'. See instructions below.

EASTERN
WASHINGTON UNIVERSITY

Computer Science

The current date is Tuesday, September 30, 2014

How old will you be when you graduate?

Enter your dates:

Birthdate:	Graduation date:
Month: 11	Month: 6
Day: 1	Day: 11
Year: 1968	Year: 2019

You will be 50 years old when you graduate. Congratulations.

A Page with Active Content

Create an ASP.NET content page that calculates a student's age at graduation. Your web page will accept a student's date of birth and a date of graduation and will display the student's age at graduation.

Include the following:

- A page_load event that will get the current date for display
 - Six text boxes to accept the student's birth and graduation year, month and day
 - A command button with underlying code that will calculate the student's age at graduation
 - A label that will present the age to the user
 - A banner image
 - A title specification
-

Making a Website Project

Start VS.

Choose File>New>Project.

Select .NET Framework 4.5 (note you may have to change to a down-level version when publishing to your service provider)

Select Visual C# and WEB.

Select the ASP.NET Web Application

Specify a name and location for the website code and click OK

To turn in your assignments, publish your website to your service provider (you will want to create a subdirectory on your server for this.) The files required to be on your server are:

Default.aspx (or the equivalent, like WebForm1.aspx)

Default.aspx.cs (or the equivalent, like WebForm1.aspx.cs)

Web.config ← You may want to use the web.config available on Canvas/Files.

Send me a link to your website in an email:
