

Lab 1 – Getting Started

15 pts.

This lab requires you to establish a web server account and domain to be used for most future assignments and labs.

Important: You must get a “Windows” hosting account (not Linux!)

You may choose any IP service provider you wish. Some suggestions:

- Microsoft Azure developer account (free)
- Advance plan Windows web server account (recommend SmarterASP.net)
- Others offering a free domain name:
https://www.google.com/?gws_rd=ssl#q=free+domain+hosting&*&spf=380
- Select a domain name
- Get an FTP client (FileZilla recommended)
- Create a simple “Hello World!” HTML page as a test document
- Publish your test page to your site

For lab credit, send an email with a link to your site to cpeters39@gmail.com
